£221.68 4.5★

Singer overlock model S0105

£285.00 4.8★

The closest budget-friendly alternative is the Brother M343D Overlocker at £199.00. Compared with the Janome 2212 bundle, it's not a direct like-for-like replacement because it's an overlocker, not a conventional sewing machine. What's better is its excellent rating, lower price, and ability to give garments a neat, professional seam finish straight off the cuff. What's worse is that it won't replace a standard sewing machine for topstitching, buttonholes, zips, or general repairs. Choose this if you already have a sewing machine and want to add clean seam finishing to your toolkit.

If you want a step up in overlock performance, the Brother 2104D Overlocker at £265.00 is a strong mid-range choice. Versus the Janome 2212, it offers a more specialised garment-making experience, especially for stretch fabrics and tidy edge finishing. It's better for sewists making lots of clothes, activewear, or knit projects, and its 4.7★ rating suggests it's well liked. The downside is price: it costs more than the Janome bundle, and again it doesn't do the full range of sewing tasks a standard machine can handle. Pick this if seam finishing is a priority and you want a reliable, everyday overlocker.

The Singer overlock model S0105 at £285.00 is another alternative aimed at neat professional finishes. Against the Janome 2212, it's more expensive but also highly rated at 4.8★. What's better is the overlocker's ability to speed up garment construction and make seams look polished, especially on knits and woven edges. What's worse is the learning curve if you're new to overlockers, plus it won't replace a general-purpose sewing machine. This is a good choice for confident makers who already sew and want to level up finishing quality.

The Brother M343D White Stainless Steel Serger 34 x 32 x 33 cm at £249.00 sits in the middle of the pack. It's similar to the standard Brother M343D, but the stainless steel build and slightly higher price may appeal if you want something that feels a bit more robust. Compared with the Janome 2212, it's again a specialist machine rather than an all-rounder. It's better for edge finishing and garment construction, but worse for versatility. Choose it if you like the idea of a sturdy-feeling overlocker and don't need a full sewing machine.

Finally, the Brother 3034DWT with Wide Table Overlocker at £335.00 is the premium option here. It's the most expensive alternative, but the wide table is a real advantage for larger projects, giving you more support when handling bigger pieces of fabric. Compared with the Janome 2212, it's far more specialised and much less suitable for basic sewing tasks, but it can be brilliant for dressmakers who regularly work on garments, home décor seams, or larger fabric panels. If you want maximum workspace and already own a standard sewing machine, this is the one to consider.

Overall, if you need a true replacement for the Janome 2212, a standard sewing machine is the right category to stay in. If you're really after cleaner finishes, faster construction, and better results on stretch fabrics, an overlocker may actually be the smarter upgrade.

Still Buy the Original If...

Choose the Janome 2212 bundle if you want a straightforward general-purpose sewing machine for everyday repairs, dressmaking, and learning the basics. It's the best pick if you need one machine that can handle a bit of everything rather than a specialist finishing tool.
